This diagram shows a top-down view of a circular device. A central vertical assembly, labeled 258, is positioned in the middle. It consists of a horizontal base, a vertical shaft, and a top flange. A curved arm, labeled 256, extends from the central shaft towards the bottom right corner. The device is enclosed within a square frame, labeled 254, which has rounded corners. At each of the four corners of the frame, there is a component labeled 252. A horizontal bar, labeled 260, is located at the bottom of the frame, connecting the two bottom corner components. The entire assembly is mounted on a base, indicated by the label 250 at the very bottom.

Top view of a circular device. A central vertical rod with a flange at the top is connected to a curved arm that extends towards the bottom right. The device is enclosed in a square frame with rounded corners. A label 262 points to the top right corner of the frame. A label 266 points to the curved arm. A label 264 points to the bottom edge of the frame, which features a series of four rounded rectangular protrusions.
